

EDUCATION

|   |             |
|---|-------------|
| <b>University of Houston, GPA: 3.8</b>                    | Houston, TX |
| <i>B.S. Computer Science, Focus: Software Development</i> | 2023 - 2026 |
| <i>B.S. Mathematics, Focus: Data Science</i>              | 2024 - 2026 |

EXPERIENCE

|  |                     |
|--|---------------------|
| <b>Tutor Fellowship</b>  | Jan 2025 – Apr 2025 |
| <i>Ignite Teach For America</i>  | <i>Remote</i>       |
| <ul style="list-style-type: none"><li>• Provided virtual one-on-one tutoring to underserved students, helping accelerate their academic progress and foster educational equity</li><li>• Participated in comprehensive professional development sessions to enhance tutoring effectiveness and student engagement strategies</li><li>• Collaborated with Ignite Site Leaders and fellow tutors to implement personalized learning approaches and track student progress</li><li>• Engaged in regular feedback sessions and development activities to continuously improve tutoring effectiveness</li></ul> |                     |
| <b>Undergraduate Research</b>  | May 2024 – Aug 2024 |
| <i>CTBP Rice University</i>  | <i>Houston, TX</i>  |
| <ul style="list-style-type: none"><li>• Conducted research on cell differentiation of chromosome ensembles using minimal models</li><li>• Utilized Minimal Polymer Models to simulate and analyze Hi-C maps for multiple human cell lines</li><li>• Performed extensive simulations of Chromosome 10 across various cell lines</li><li>• Developed computational protocols for ensemble analysis using techniques such as PCA, t-SNE, and UMAP</li><li>• Collaborated with team members and presented findings in weekly meetings</li></ul>  |                     |

PROJECTS

|   |
|---|
| <b>Medical Clinic Management System</b>   MySQL, Node.js, Express, Sequelize, React   |
| <ul style="list-style-type: none"><li>• Designed and implemented a detailed database schema for efficient management of medical clinic operations</li><li>• Developed a backend API using Node.js, Express, and Sequelize ORM, establishing complex relationships between entities</li><li>• Implemented user authentication and role-based access control for secure data management across different user roles</li><li>• Created API endpoints for core functionalities including user registration, appointment scheduling, and medical record management</li></ul>   |
| <b>OpenMiChroM</b>   Python   |
| <ul style="list-style-type: none"><li>• Developed a Python-based analysis tool for processing and visualizing Hi-C data from chromosome simulations</li><li>• Utilized advanced dimensionality reduction techniques including PCA, t-SNE, and UMAP for analyzing chromosome structural ensembles</li><li>• Created efficient data processing pipelines to handle large-scale genomic datasets from multiple human cell lines</li><li>• Incorporated CUDA GPU acceleration and Multithreading capabilities to enhance performance on large datasets</li><li>• Implemented caching mechanisms to optimize repeated computations and improve overall efficiency</li><li>• Successfully differentiated human cell lines based on subtle differences in simulated chromosomal structures, revealing cell-type-specific information</li></ul> |

SKILLS

|  |
|--|
| <b>Technical:</b> C/C++, Python, JavaScript/TypeScript, PostgreSQL, Git, Linux/Unix, Docker                  |
| <b>Development:</b> Multithreading, Memory optimization, Full-stack development                              |
| <b>Professional:</b> Communication, Problem-solving, Research methodology, Team collaboration, Data Analysis |

RELEVANT COURSE WORK

|   |
|---|
| <b>Computer Science:</b> Algorithms & Data Structures, Operating Systems, Database Systems, Software Engineering, Software Design |
| <b>Mathematics:</b> Linear Algebra, Probability, Statistics for Sciences, Calculus I-III, Discrete Mathematics                    |
